

TESTING FRAMEWORK BRAINSTORM

: need to address potential conflict w/ privacy policy

- * Needs to work with VBA → Pytest cannot run inside Outlook directly
 - can use Python's win32com.client to drive Outlook via COM automation (invokes VBA macros and then can validate results using pytest assertions)
 - ANOTHER OPTION: Rubberduck VBA (open source add-in)

PRO
runs natively inside VBE

CON
need to install 3rd party desktop installer

MASSIVE NICE-TO-HAVE

Sharepoint spreadsheet gets updated (VBA is ran) automatically when new mail gets added to folder.

- * migrate environment to personal computer
- Ⓜ replicate sample data (REDACT!)

TEST CASES / FEATURES

New Claims List

- ☐ extracts claim number
- ☐ extracts date received
- ☐ extracts insured
- ☐ extracts adjuster
- ☐ remove duplicates

Nice-to-haves:

- ☐ extracts insurer
- ☐ generate to-do list of docs to prep for insurer (need to populate database w/ guidelines)
- * prompt user to add own guidelines/checklist

Claims to Setup List

- ☐ extracts email subject
- ☐ extracts date received
- ☐ removes duplicates (regex on FW, RE, etc)

Nice-to-haves:

- ☐ Spreadsheet row gets updated once claim is set up
 - ↳ match insured name in "New claims List," then mark as Done/green

ECS List

- ☐ extracts ECS number
- ☐ extracts email title
- ☐ extracts date received

Nice-to-haves:

- ☐ extracts insurer
- ☐ extracts branch
- ☐ populates "link to ECS call page"
- ☐ provides insurer & branch email
